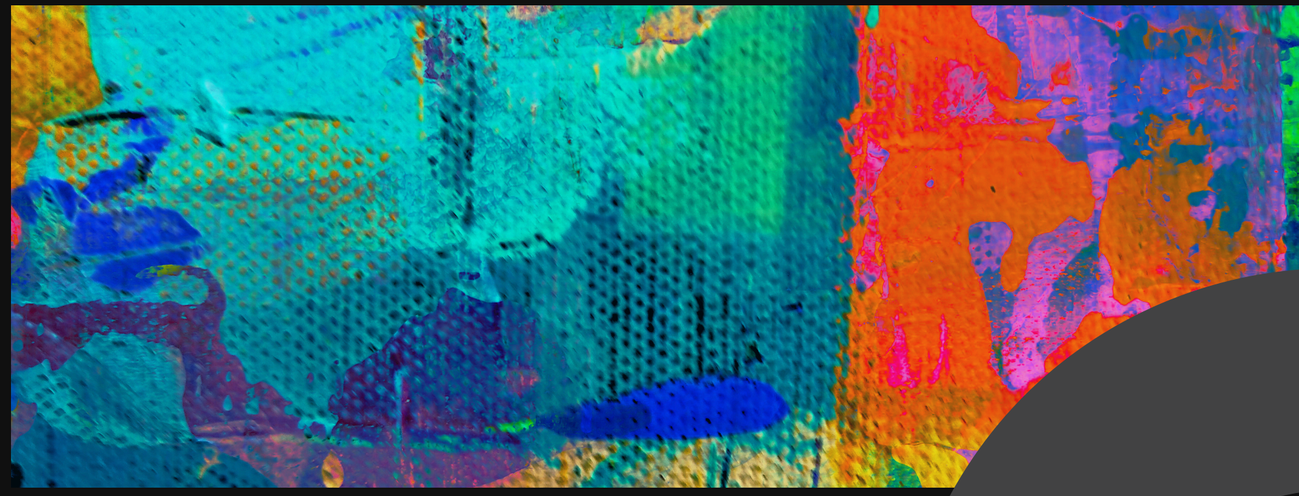
About Me

Hi, I am Borhan Uddin— a passionate Web Developer and Workflow Automation Specialist.

I specialize in building responsive, high-performance web applications and automating repetitive business operations. My mission is to help modern businesses eliminate manual errors, connect diverse platforms via APIs, and save valuable working hours.

Whether it is developing clean user interfaces or creating robust backend scripts and bots, I focus on delivering scalable, result-driven solutions.



Professional Journey & Focus

Skills In Action

Starting with a passion for web technologies, I dove deep into modern frontend and backend tools. I quickly realized that the real power lies in combining web apps with smart automations that save businesses hours of manual effort.

Today, my core focus is on writing clean, scalable code and building automated pipelines helping modern businesses streamline operations, connect APIs, and eliminate data entry bottlenecks.

Committed to continuous learning and building in public. Every project I build is focused on high performance, clean logic, and real-world impact.

Technical Skills

Tools & Technologies

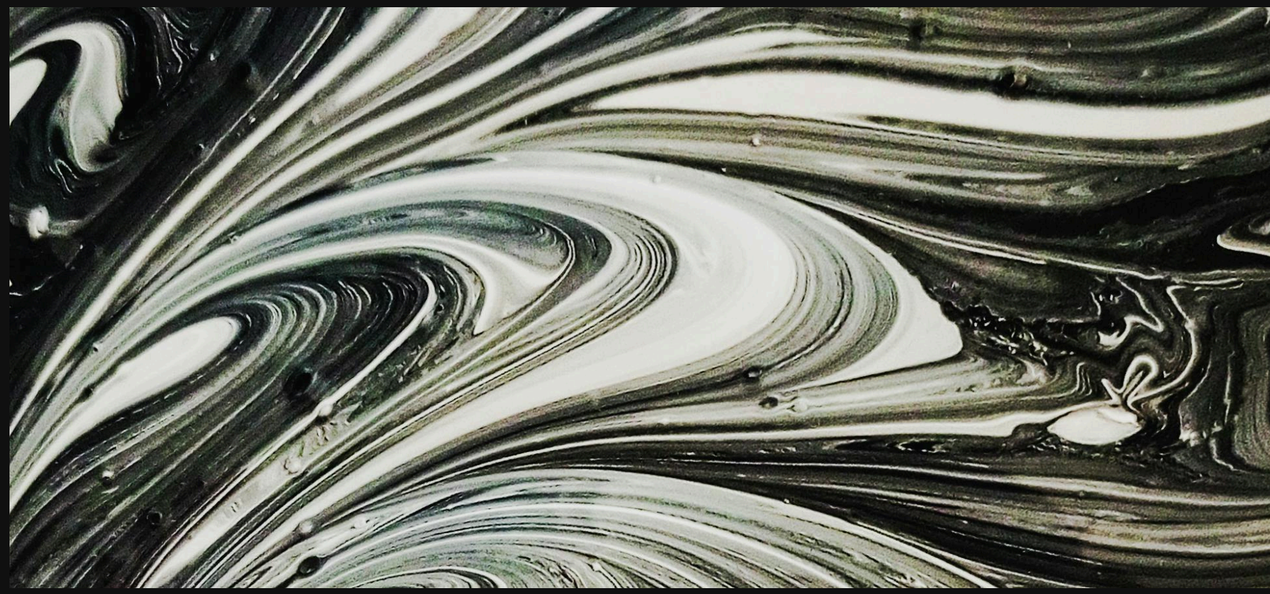
Combining modern web frameworks with powerful scripting and automation engines to build seamless digital solutions.

- Frontend: HTML5, CSS3, JavaScript, React.js, Tailwind CSS
- Backend: Node.js, Express, Python, REST APIs
- Automation: Python Scripts, Playwright, n8n, Make
- Database and Tools: Git, GitHub, PostgreSQL/ MongoDB

Workflow Automation & Integration

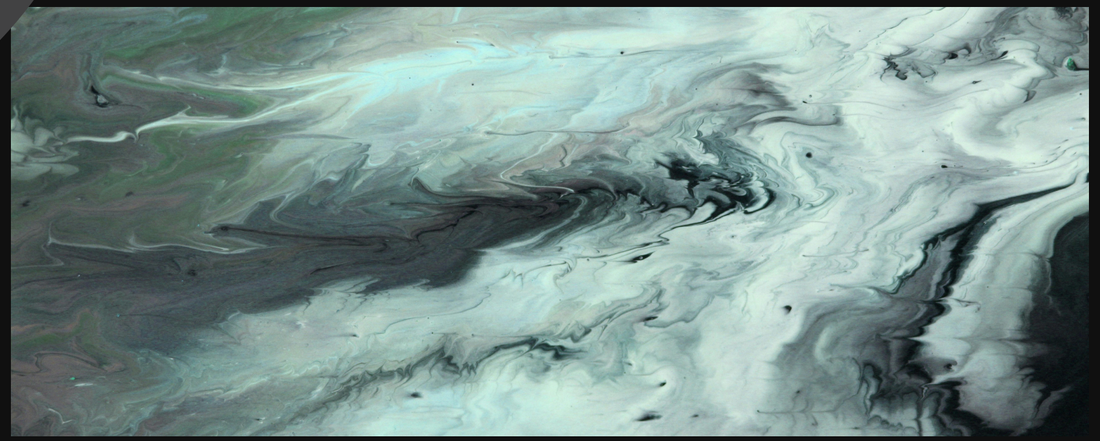
Designing smart bots and custom scripts to scrape data, connect different software platforms, and run background processes automatically without human intervention.

Automated Lead Scraper & CRM Sync

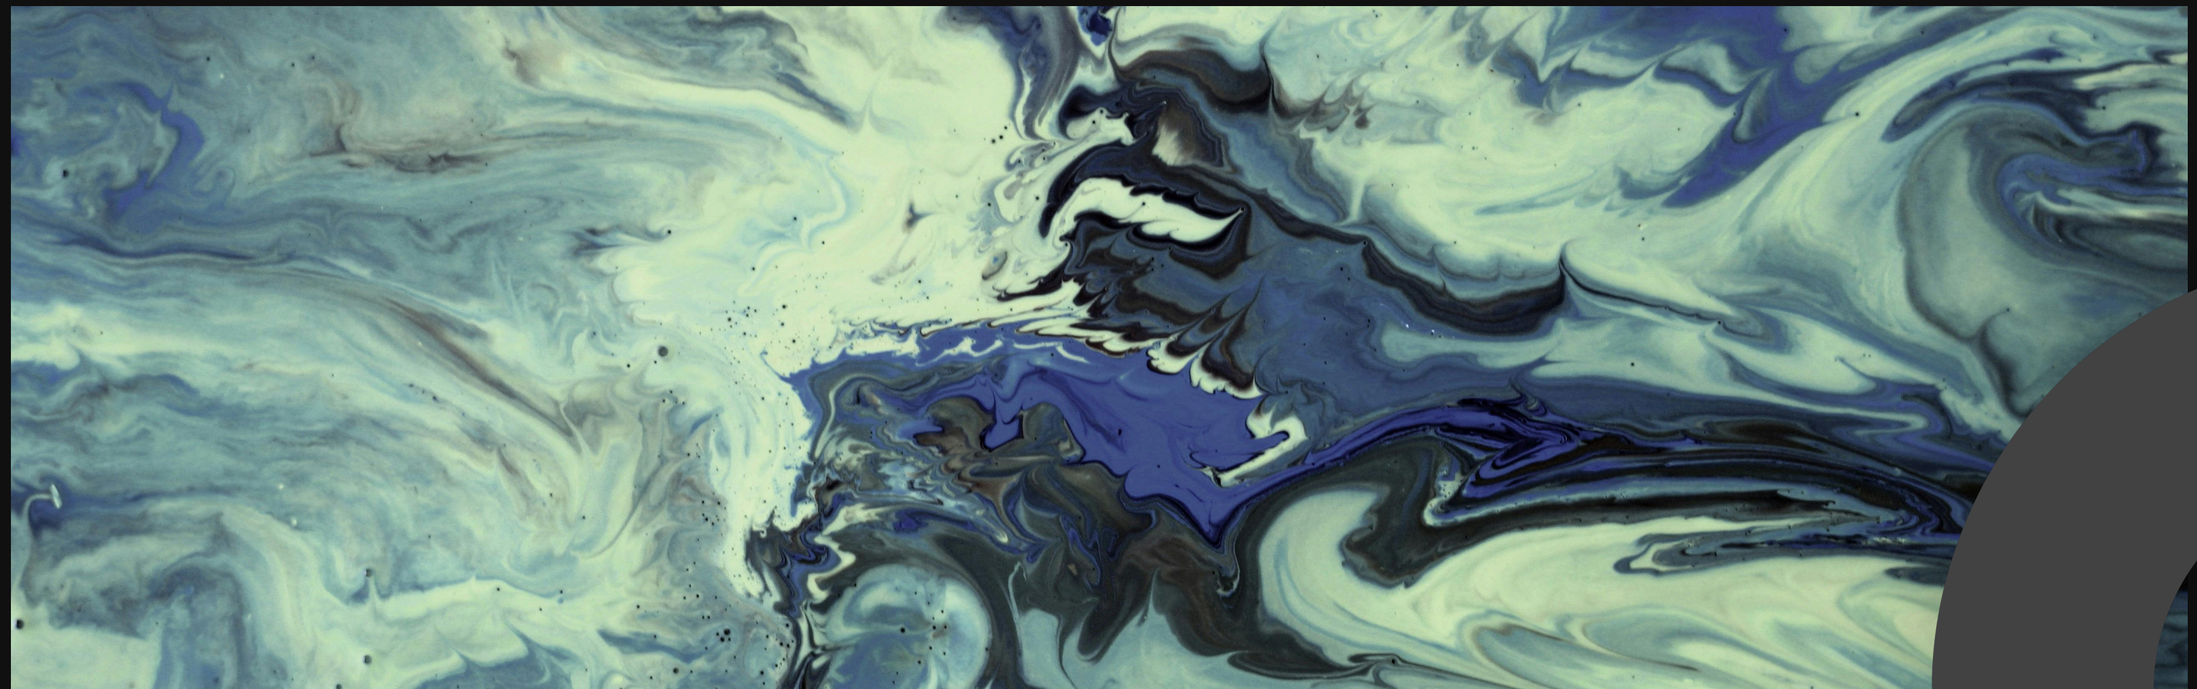


- Python & Playwrigh
- Automated Data Extraction
- API Integration & Webhook
- High-Speed Workflow & ROI

Built an automated workflow that scrapes data from multiple target sources, cleans and formats the output, and directly updates Google Sheets & CRM in real time without any manual work.



Full-Stack Business Web App



My Working Process

tured, step-by-step approach ensuring high code quality, reliable automation, and smooth delivery.

1. Discovery and Analysis: Understanding requirements & identifying manual bottlenecks.
2. Architecture and Code: Writing clean, scalable code with modern frameworks.
3. Testing and Automation: Rigorous error handling, testing, and workflow triggers.
4. Deployment & Monitoring: Smooth launch and continuous performance optimization.

Core Competencies & Impact

Transforming manual workflows into efficient, automated systems.

• Automated Workflows: Reduced repetitive manual tasks by up to 80% through smart scripts and tools.
• Responsive Web Apps: Built fast-loading, mobile-friendly websites with clean architecture.
• API and Data Handling: Seamlessly connected 3rd-party services, webhooks, and databases.
• Continuous Improvement: Constantly adopting the latest tech stack to deliver modern solutions.

Clean & Scalable Code

Fast & Clear Communication

Problem-Solving Mindset

On-Time Delivery & Support

Why Work With Me

What Sets Me Apart

I don't just write code; I focus on solving real business problems, eliminating repetitive tasks, and building digital tools that save time and increase productivity.

Thank You!
